Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Neurokinin Receptor Antagonists competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Neurokinin receptor antagonists are an innovative class of oral small-molecule drugs used to prevent and treat postoperative and chemotherapy-induced nausea and vomiting, selectively blocking neurokinin receptors such as substance P and neurokinin B to reduce the transmission of vomiting signals. Their production relies on high-purity active pharmaceutical ingredients (APIs) and key chemical intermediates. Upstream raw materials primarily include amino acid derivatives and organic small-molecule precursors, supplied by companies such as Lonza and Evonik. Formulation manufacturers convert these materials into final oral tablets or capsules through precise synthesis processes to ensure stability and bioavailability. In 2024, global sales of neurokinin receptor antagonists reached 6.03 million boxes, with an average price of 225 USD per box, an average gross margin of 41.5%, and a single production line annual capacity of 300,000 boxes.
