Abstracts

Pain management is a branch of medical science, which eases the suffering of patients who suffer from chronic pain. Acute pain has sudden onset of action, whereas chronic pain persists for a longer duration, which leads to need for its management.

Neuromodulation and Neurostimulation Pain Management Devices are medical devices that are used in management of different types of pain such as neuropathic pain, cancer pain, Facial & Migraine Pain, Musculoskeletal Pain, and others. Spinal cord stimulators, transcutaneous electrical nerve stimulation devices, analgesic infusion pumps, and ablation devices are various types of pain management devices available in the market. The growth of the global pain management devices market is driven by increase in geriatric population, rise in prevalence of chronic pain, surge in geriatric population, surge in awareness among people toward pain management devices, improved R&D investment to develop innovative products, and launch of innovative products. In addition, increase in demand for pain management devices among the developing countries and rise in adoption of pain management devices for management of chronic pain are other factors that contribute toward the growth of the market. Furthermore, untapped potential offered by developing economies present lucrative opportunities for market expansion during the forecast period. However, hypersensitivity reactions and post-operative infections caused due to use of these devices limit their adoption, which hampers the growth of the market. Moreover, these devices are usually used as second line of treatment in patients with chronic pain who become resistant to drug therapy, which limits the growth of the global pain management devices market.

The global Neuromodulation and Neurostimulation Pain Management Devices market size was estimated at USD 2265.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
