Report Overview

Neutral borosilicate glass tube 50 refers to a high-performance glass tubing made from borosilicate glass, typically characterized by its low thermal expansion, high chemical resistance, and durability under extreme temperature variations. The "50" denotes a standard diameter or measurement, often 50 mm, though specifications may vary by manufacturer. This type of glass is widely used in laboratory equipment, pharmaceutical packaging, industrial applications, and specialized lighting due to its ability to withstand harsh conditions without compromising structural integrity. Its neutrality ensures minimal interaction with chemicals, making it ideal for sensitive scientific and medical uses where contamination must be avoided. The material's clarity, thermal shock resistance, and mechanical strength further enhance its suitability for precision applications in both commercial and industrial sectors.
