### Report Overview

Neutron detectors consist of materials that interact with neutrons. Although the principle reaction mechanisms of neutrons with matter are limited, the options for detection media are quite numerous. Detectors can consist of solid, liquid, or gas-filled media. Beside the detection mechanism, there is one major challenge for all types of neutron detectors. They all need to be insensible to gamma ray emission or at least require an implemented technique to discriminate between neutron and background gamma ray events, as neutron detection often takes place in a mixed radiation field.

The global Neutron Detection Equipment market size was estimated at USD 139.70 million in 2023 and is projected to reach USD 188.75 million by 2032, exhibiting a CAGR of 3.40% during the forecast period.
