Abstracts

The market for new energy heavy trucks encompasses commercial vehicles with a gross vehicle weight exceeding 3.5 tons that utilize alternative energy sources, primarily electricity (battery electric vehicles or BEVs) and hydrogen fuel cells (FCEVs), as opposed to conventional internal combustion engines running on diesel or gasoline. These vehicles are designed to serve various heavy-duty applications, including logistics, construction, mining, and port operations, with a focus on reducing greenhouse gas emissions, lowering operating costs through decreased fuel consumption, and meeting increasingly stringent global environmental regulations. The market is characterized by ongoing technological advancements in battery energy density, charging infrastructure, and hydrogen production and refueling networks, alongside evolving government policies, subsidies, and incentives aimed at accelerating the adoption of zero-emission heavy-duty transport. Key players include established truck manufacturers transitioning their product lines, as well as new entrants specializing in electric or hydrogen powertrains, all competing within a landscape shaped by total cost of ownership considerations, infrastructure readiness, and end-user operational requirements.

The global New Energy Heavy Trucks market size was estimated at USD 8500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 25.50% during the forecast period.
