### Report Overview

The new energy oil-cooled motor is to improve the heat dissipation capacity of the motor, and the oil itself has no effect on the magnetic circuit of the motor because of the local non-magnetic, non-flammable, non-conductive and good heat conduction characteristics. Compared with water cooling, the advantages are good insulation performance, higher boiling point of oil than water, and lower freezing point than water, so that the coolant is not easy to freeze at low temperatures and not easy to boil at high temperatures.
