Abstracts

Gears for new energy vehicles are mainly used in electric drive systems, and are responsible for converting the high-speed rotation of the motor into torque and speed suitable for driving the wheels. Compared with traditional fuel vehicle gears, new energy vehicle gears usually operate at higher speeds and in a low-noise working environment, so higher requirements are placed on the material, precision, and lubrication system of the gears. Commonly used materials include high-strength steel and lightweight alloys, and some models also use advanced coating technology to improve the wear resistance of the gears, reduce friction, and ensure efficient, quiet, and durable operation of the transmission system. In 2023, the global sales of new energy vehicles will be about 14.61 million, a year-on-year increase of 38%. Among them, China's new energy vehicle sales volume is 9.495 million, ranking first, accounting for 65% of the global new energy vehicle market. The top five countries in the world are: the United States 1.471 million, Germany 699,000, France 486,000, and 474,000. The core components of fuel vehicles are engines + gearboxes. In order to ensure their own core competitiveness, the OEMs tend to make their own gearboxes and gears. The supply system is relatively closed, and independent auto gear manufacturers have a small market share. In the era of new energy vehicles, pure electric vehicles have higher design requirements for gears than traditional fuel vehicles, and the performance requirements for high speed, high load, meshing accuracy and noise have been greatly improved, thereby raising the technical threshold of the industry. The three major parts of electric vehicles are "battery + motor + electronic control", and their core competitiveness is shifting towards intelligence. Self-made gears cannot bring competitive advantages, so gears tend to be outsourced.

The global New Energy Vehicle Gear market size was estimated at USD 2014.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 21.10%

during the forecast period.
