Abstracts

The market for new energy vehicle (NEV) insurance encompasses specialized insurance products designed to address the unique risks and characteristics of electric vehicles (EVs), plug-in hybrids (PHEVs), and fuel cell vehicles (FCVs), including coverage for high-voltage batteries, charging equipment, specialized repair networks, and emerging technologies such as autonomous driving features. Unlike traditional auto insurance, NEV policies often incorporate usage-based elements, telematics data for personalized premiums, and considerations for battery degradation or replacement costs, reflecting the distinct operational, maintenance, and safety profiles of these vehicles. Insurers are adapting to evolving regulatory frameworks, technological advancements, and consumer expectations, with product innovation increasingly focused on mitigating risks associated with cybersecurity, charging infrastructure, and the higher initial repair costs typical of NEVs due to their advanced electronics and specialized parts.

The global New Energy Vehicle Insurance market size was estimated at USD 85000.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 22.50% during the forecast period.
