A newborn identification tag is a crucial device used in healthcare settings, primarily hospitals, to accurately identify and safeguard newborns. These tags are typically attached to the baby's wrist or ankle and contain essential information such as the baby's name, gender, date and time of birth, and the mother's name or identification number. They come in various forms, including simple printed wristbands, barcoded tags for easy scanning into hospital information systems, and more advanced RFID - enabled tags that allow for quick and contactless identification. Newborn identification tags play a vital role in preventing mix - ups, ensuring that each baby receives the correct medical care, medications, and vaccinations. Additionally, security - focused tags are designed to prevent infant abduction by triggering alarms if the baby is moved out of designated areas. In some cases, biometric - based identification methods, like fingerprint or DNA - based tags, are used for highly accurate identification, especially in legal or high - security situations. Overall, newborn identification tags are an indispensable part of ensuring the safety, well - being, and proper management of newborns in medical environments.
