Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Next-Gen Lithium Batteries competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Next-generation lithium batteries refer to advanced energy storage technologies that go beyond the capabilities of conventional lithium-ion batteries (LIBs) in terms of energy density, safety, cycle life, charging speed, and environmental impact. These batteries often utilize novel materials or architectures such as solid-state electrolytes, silicon-based or lithium metal anodes, high-nickel or cobalt-free cathodes, or novel configurations like lithium-sulfur (Li-S) and lithium-air (Li-O₂) systems. They aim to meet the stringent performance demands of electric vehicles (EVs), grid storage, aerospace, and wearable electronics, while addressing limitations such as thermal runaway, limited range, and resource scarcity. Next-gen lithium battery formats include solid-state batteries (SSBs), semi-solid batteries, anode-free batteries, and prelithiated battery cells, representing the forefront of global battery innovation. Next-generation lithium batteries are characterized by advanced parameters that surpass traditional lithium-ion cells in energy density, safety, and longevity. Key performance metrics include gravimetric energy density of 300-500 Wh/kg (with targets exceeding 500 Wh/kg in Li-S or lithium-metal chemistries), volumetric energy density of 700-1200 Wh/L, cycle life ranging from 1000 to over 5000 cycles, and fast-charging capability achieving 80% state of charge in under 15 minutes. These batteries often use innovative materials such as silicon-carbon or lithium-metal anodes, high-nickel or lithium-sulfur cathodes, and solid-state, gel-polymer, or ionic liquid electrolytes. Supporting parameters include high coulombic efficiency (>99.9%), low self-discharge (
