Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on NFC Control Chip competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. NFC control chips are core near-field communication devices that integrate radio frequency front-end, modulation and demodulation, power management, and security units. They enable devices to complete identity authentication, data exchange, and secure payments within a few centimeters, achieving contactless connections between mobile phones, wearables, smart cards, and reader/writer devices. The upstream of the industry chain includes wafer manufacturing, memory and security unit IP, packaging materials, and antenna components; and the downstream comprises manufacturers of smartphones, wearable devices, POS terminals, access control locks, vehicle key systems, and urban transportation card equipment, ultimately targeting the financial, transportation, access control, retail, and IoT application markets. In 2024, the global NFC controller chip market had a unit price of \$5 per chip, with sales of approximately 1.551 billion chips and a global production capacity of 1.65-1.7 billion chips, resulting in an industry profit margin of 15-20%. The global NFC control chip market will continue to be driven by the increasing penetration of smartphones and wearable devices. The integrated application of "card, certificate, and ticket" systems, such as mobile payments, public transportation, and access control, is rapidly becoming more widespread. Standalone NFC functionality is gradually expanding from high-end models to mid-to-low-end and IoT terminals, leading to steady growth in shipments. Secondly, with the development of connected vehicles, smart locks, and smart home appliances, new scenarios such as NFC digital keys, car keys, and lock/appliance pairing are rapidly emerging. This is driving iterative upgrades of NFC control chips in terms of power consumption, longer sensing distance, anti-interference

performance, and multi-mode integration with BLE/UWB, as well as deep integration with security chips/SEs to improve payment and identity authentication security. Thirdly, driven by domestic substitution and regional security needs, a multi-polar competitive landscape will emerge in regions such as Europe, the US, Japan, South Korea, and China. Domestic manufacturers are rapidly entering niche markets such as transportation cards, access control, and IoT terminals, pushing NFC control chips towards higher integration, lower cost, platformization, and ecosystem development. Industry concentration is expected to further increase.

The global NFC Control Chip market size was estimated at USD 7755.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
