Abstracts

Nickel-based secondary batteries are rechargeable batteries that use nickel as a key component in their chemistry. These batteries typically include nickel-cadmium (NiCd) and nickel-metal hydride (NiMH) types. In these batteries, nickel plays a crucial role in the positive electrode, while the negative electrode varies depending on the specific battery type. Nickel-based secondary batteries are known for their durability, ability to deliver high power output, and relatively long cycle life compared to other battery chemistries. They have been widely used in applications such as power tools, hybrid vehicles, and portable electronics, although their use has declined in favor of lithium-ion batteries due to energy density and environmental concerns.

The global Nickel-based Secondary Batteries market size was estimated at USD 1531.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.10% during the forecast period.
