Abstracts

Nickel bond dicing blades are specialized cutting tools used in semiconductor manufacturing, specifically designed for the precision dicing of wafers and substrates where materials are bonded with nickel or nickel-based alloys; these blades feature a composite structure with diamond abrasive particles uniformly embedded within a nickel matrix, which provides a unique combination of hardness, toughness, and wear resistance necessary to cleanly cut through hard, brittle materials like silicon, gallium arsenide, or ceramics without delaminating the nickel-bonded layers or causing micro-cracking, thereby ensuring high yield and reliability in the production of integrated circuits, MEMS devices, and other microelectronic components.

The global Nickel Bond Dicing Blade market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
