Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Nickel Hydroxide competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Nickel hydroxide is a green, crystalline, inorganic compound that produces toxic gases upon heating. It is generally used in rechargeable battery electrodes, by oxidation to nickel (III) oxide-hydroxide. Nickel hydroxide is denoted by $\text{Ni}(\text{OH})_2$ and is an insoluble chemical compound having strong redox properties. In 2024, global Nickel Hydroxide production reached approximately 37.7 K MT, with an average global market price of around 11428USD/MT. The nickel hydroxide market continues to grow as demand rises from industries reliant on rechargeable battery technologies and specialty chemical applications. Nickel hydroxide serves as a key electrode material in nickel-based batteries including nickel-metal hydride (NiMH) and nickel-cadmium varieties thanks to its favorable electrochemical properties. In addition, it's used in catalysis, chemical intermediates, and electroplating processes. The increasing need for energy storage in consumer electronics, portable devices, and hybrid vehicles, along with rising industrial-scale battery usage, is driving steady interest in high-purity nickel hydroxide. Supply growth in this market is supported by improvements in production routes including precipitation, co-precipitation, and controlled crystallization techniques that aim to achieve better particle control, purity, and performance consistency. Meanwhile, sustainability concerns and shifts toward greener manufacturing are driving research around recovering nickel feeds from recycled spent batteries and minimizing environmentally harmful processing by-products. However, challenges remain including volatile raw material prices, stringent quality specifications required for battery-grade material, and regional disparities in mining and refining capacity. As battery chemistry evolves and sustainability becomes more central, nickel hydroxide is expected to

remain a vital material in both energy and industrial applications.

The global Nickel Hydroxide market size was estimated at USD 431.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
