Abstracts

Nickel plating is a metal finishing process in which a thin layer of nickel is applied over steel sheet. Nickel plated steel strips are designed to make further processing more efficient and cost-effective. Cold rolling, electroplating with nickel and diffusion annealing provide excellent deep drawing capability and corrosion resistance. Nickel plated steel strips is widely used in battery field. Nickel plated steel strips for battery connectors are used to connect single battery cell into a battery pack. As the EV market continues to expand, the demand for high-quality nickel-plated steel strips is expected to grow. Manufacturers are working to develop more cost-efficient and sustainable plating processes. Innovations in alloying techniques and the exploration of alternative coatings may also emerge as key trends to address the rising demand for performance and durability. There are three main types of lithium-ion batteries: cylindrical cells, prismatic cells, and pouch cells. In the EV industry, the most promising developments revolve around cylindrical and prismatic cells. While the cylindrical battery format has been the most popular in recent years. During Tesla's Battery Day 2020, Drew Baglino, SVP Powertrain and Energy Engineering, and Elon Musk, CEO, introduced the 4680 battery. This event fuels the development of large cylinder lithium battery industry further, which sufficient drivers for nickel plated steel strip. Presently, production of nickel plated steel strips mainly distributes in Japan, Europe, USA, Korea and China. Producers from Japan have long and good reputations for their products. While, in China, which is the largest production base of lithium battery, related companies are actively planning their nickel plated steel strips to meet the increasing downstream demand.
