Report Overview:

A nickel target, also known as a nickel sputtering target or nickel deposition target, is a specialized material used in physical vapor deposition (PVD) techniques, such as magnetron sputtering, to deposit thin films of nickel onto a substrate.

Nickel targets are typically made of high-purity nickel metal and are manufactured in the form of a disc or plate. They serve as the source material in a sputtering process where high-energy ions are bombarded onto the target surface, causing nickel atoms to be ejected and deposited as a thin film on the substrate.
