Abstracts

Nickel tetrafluoroborate is a highly specialized inorganic salt primarily used as an electroplating chemical in the electronics, automotive, and aerospace industries, where it serves as a key component in nickel plating baths to deposit uniform, corrosion-resistant, and conductive nickel coatings on substrates such as connectors, printed circuit boards, and precision components. The compound's properties including high solubility, stability in acidic electrolytes, and ability to produce fine-grained, low-stress deposits make it particularly valuable for applications requiring high-performance finishes with excellent adhesion and minimal porosity. Market dynamics are heavily influenced by demand from end-use sectors, regulatory frameworks governing chemical use and waste disposal, raw material availability (notably nickel and fluoroboric acid), and technological advancements in electroplating processes that prioritize efficiency and environmental compliance.

The global Nickel Tetrafluoroborate market size was estimated at USD 35.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
