The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Nicotine Oral Spray competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Nicotine oral spray is a nicotine replacement therapy (NRT) product used to assist smoking cessation. It quickly absorbs nicotine through the oral mucosa to relieve smoking addiction and withdrawal symptoms. It usually looks like a portable spray device. When used, a quantitative spray is sprayed into the buccal cavity or under the tongue. Nicotine quickly enters the blood circulation and takes effect faster than chewing gum or patches, but slower than smoking. This product is suitable for on-demand use when there is a sudden strong desire to smoke. Dosage instructions must be strictly followed to avoid overdose. Common side effects include oral irritation, sore throat or hiccups. As an over-the-counter drug, it helps smokers gradually get rid of their dependence on tobacco by providing a controllable dose of nicotine, but behavioral intervention is required to increase the success rate of quitting smoking.

The global Nicotine Oral Spray market size was estimated at USD 106.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.90% during the forecast period.
