A Nitrogen Elemental Analyzer is a scientific instrument used to determine the nitrogen content in a sample. It works by combusting the sample at high temperatures in the presence of oxygen, converting all the nitrogen present into nitrogen gas (N₂). The generated nitrogen gas is then separated from other combustion products and measured using various detection methods, such as thermal conductivity or chemiluminescence. The instrument provides accurate and precise measurements of nitrogen content, which is useful in various fields including environmental analysis, food and agriculture, pharmaceuticals, and materials science.

The global Nitrogen Elemental Analyzer market size was estimated at USD 435.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
