Abstracts

The NK Cell Isolation Kit is designed to magnetically isolate NK cells from a complex immune cell population. The kit is optimized for the isolation of CD56+CD3- cells from normal human peripheral blood mononuclear cells (PBMCs). The cells are incubated with a cocktail of antibodies and then bound to magnetic beads. They are then placed on a magnet for quick and easy separation. When placed on the magnet, non-NK cells will be fixed to the side of the tube, while NK cells will remain in suspension and can be easily removed for downstream applications.

The global NK Cell Isolation Kit market size was estimated at USD 896.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
