Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on NMN Raw Materials competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Nicotinamide mononucleotide (NMN) is an intermediate of NAD⁺ biosynthesis produced from nicotinamide through nicotinamide phosphoribosyltransferase (NAMPT) and also referred to as NMN or nicotinamide ribotide. In recent studies of NMN applications to prevention and diagnosis of age-dependent diseases such as diabetes, neurodegenerative disorder, cardiac disease etc., it has become one of hottest biomarkers on discussion for anti-aging, lately. NMN is a precursor of nicotinamide adenine dinucleotide (NAD⁺), which plays a vital role in cell metabolism and energy production. As we age, the level of NAD⁺ in the human body gradually decreases, resulting in weakened cell metabolism, which in turn triggers a series of aging-related diseases. Therefore, increasing the level of NAD⁺ in the body by supplementing NMN has become a new way to fight aging and maintain good health. With the general improvement of global health awareness and continuous breakthroughs in scientific research and technology, the growth momentum of the NMN market will continue to increase. In the future, the NMN market will achieve a deeper cross-border integration with other health industries such as biotechnology, precision medicine, and nutritional supplements, giving rise to a series of innovative products and service models to meet consumers' more personalized and precise health needs. In 2024, global NMN Raw Materials production reached approximately 192.6 MT, with an average global market price of around US\$ 2,169 per kg. The global single-line production capacity ranges from 10 to 20 MT per year. The industry's gross profit margin is approximately 30%-50%. The Nicotinamide Mononucleotide (NMN) Raw Materials market mainly covers dietary supplements, functional foods and drinks, and a

small but growing share of cosmetics and skincare that use NMN as a key active. In simple terms, it is the part of the health and beauty industry built around the idea that boosting NAD⁺ levels in the body or in the skin may support energy metabolism, help manage some age-related changes, and improve overall vitality. Scientific reviews show that NMN can increase NAD⁺ and influence pathways linked to metabolism, blood vessel function, and tissue repair in animal models and early human studies, although long-term clinical evidence is still limited. Even with these scientific uncertainties, interest from consumers has grown quickly. One important trend is the shift from "niche biohacker supplement" to more mainstream wellness product. Media articles and social platforms now talk about NAD⁺ boosters as a new anti-aging and energy trend, and supplements based on precursors like NMN and nicotinamide riboside are widely promoted online. This exposure helps move NMN from specialist longevity communities into everyday conversations about tiredness, skin quality, and healthy aging. At the same time, the broader market for NAD-related products is expanding as more consumers look for non-stimulant ways to support energy, focus, and recovery, which indirectly supports NMN demand. Aging populations and rising interest in "healthy longevity" are strong underlying drivers. In many countries, people are living longer, yet worry about chronic disease and declining quality of life in older age. NMN is marketed as part of a proactive approach: not a cure for disease, but a way to support cellular processes that weaken with age, such as energy production and DNA repair. Scientific papers that describe how NMN restores NAD⁺ pools and activates proteins like sirtuins in animal models reinforce this story and are frequently referenced in brand communication, even if the data are not yet definitive for all human outcomes. This mix of biology narrative and simple lifestyle promise ("age better, not just longer") is a powerful sales driver. Overall, the NMN Raw Materials market is being driven by three main forces: strong consumer interest in longevity and anti-aging, expanding (though still evolving) scientific and regulatory support, and rapid product and channel innovation. While questions about long-term efficacy, safety, dosing, and fair marketing will continue, these drivers suggest that NMN is likely to remain a prominent ingredient in both supplements and advanced skincare for the coming years.

The global NMN Raw Materials market size was estimated at USD 418.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.40% during the forecast period.
