Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on NMP Recovery System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. NMP is a valuable resource widely used in lithium batteries, chemical industry and other fields. Through recycling and reuse, the cost of raw materials can be significantly saved and the efficiency of resource utilization can be improved. The NMP recovery system effectively reduces waste emissions and reduces the risk of soil and water pollution. At the same time, it reduces secondary pollution caused by waste treatment and helps to build a green ecological environment. In recent years, China's NMP synthesis capacity has increased rapidly, and has approached a large proportion of the world's total capacity. New energy vehicles have become the mainstream development trend, and China is the largest production and consumption market for new energy vehicles and power batteries. With the rapid growth of power battery production, the NMP recycling market has also ushered in explosive growth. Global key players of NMP Recovery System include ShengHe, Ousailai Technology, Zhongchuang Environmental Technology, Pengjin Technology, Mitsubishi Chemical, etc. The top five players hold a share about 62%. Asia-Pacific is the largest market, and has a share about 83%, followed by North America and Europe with share 9% and 6%, separately. In terms of product type, Rotor Recovery Type is the largest segment, accounting for a share of 54%. In the production of lithium batteries, NMP is used as a solvent to dissolve lithium salts and polymer electrolytes, which plays a vital role in improving the energy density and coating quality of lithium batteries. From the application perspective, NMP is mainly used in lithium batteries and the global share will reach 85.53%. Global key players of NMP Recovery System include ShengHe, Ousailai Technology, Zhongchuang Environmental Technology, Pengjin Technology, Mitsubishi

Chemical, etc. The top five players hold a share about 62%. It is expected that industry competition will become more intense in the next few years. NMP (N-methylpyrrolidone) recovery system companies should increase their investment in the research and development of NMP recycling technology to improve recycling efficiency and purity and reduce costs. Pay close attention to changes in national and local government policies and regulations, and adjust corporate business strategies in a timely manner to adapt to the policy environment.

The global NMP Recovery System market size was estimated at USD 131.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.40% during the forecast period.
