Report Overview

Deuterated reagent chemicals are derived from nuclear physics heavy water refining industrial derivatives. The introduction of the atomic bomb in the 1940s promoted the rapid development of the seawater heavy water refining industry, and gradually shifted from military and national defense use to high-tech research and development applications. Nuclear magnetic resonance instruments need to use a large amount of deuterated reagents, which are used to avoid the interference of hydrogen atoms in common solvents, so as to accurately analyze the proportion of hydrogen elements in organic molecules.
