Report Overview

NMR spectroscopy provides a route to the understanding of lectin–carbohydrate interactions. NMR is not as powerful as X-ray crystallography in solving the structures of large, multimeric proteins. However, small monomeric proteins are suitable and the described transferred NMR methods offer an imprint of the ligand-binding site. The ideal situation is when a 3D structure of a lectin is available and a combination of transferred NMR and modeling provide a structure of the complex and such projects often provide a saving in materials and time compared to solving the crystal structure of the complex. We hope this broad overview of NMR spectroscopy is of value to the lectin biochemist.

This report provides a deep insight into the global NMR Spectroscopy market covering all its essential aspects. This ranges from a macro overview of the market to micro details of the market size, competitive landscape, development trend, niche market, key market drivers and challenges, SWOT analysis, value chain analysis, etc.
