Abstracts

No clean solder pastes are specialized materials used in the surface mount technology (SMT) assembly process, consisting of a homogeneous and stable mixture of powdered solder alloy and flux that is applied to printed circuit board (PCB) pads before component placement and reflow soldering; their defining characteristic is the flux formulation, which leaves minimal non-conductive, non-corrosive residue after reflow that does not require cleaning, thereby eliminating post-soldering washing steps, reducing production time, costs, and environmental impact, while still ensuring reliable electrical connections and long-term performance in a wide range of electronic applications.
