Report Overview

No negative pressure frequency water supply equipment is a type of water supply system that uses a variable frequency pump to control the water flow and pressure. It can automatically adjust the pump speed according to the water demand and maintain a constant pressure in the pipe network. It can also prevent the occurrence of negative pressure, which is a condition where the water pressure drops below the atmospheric pressure and causes air to enter the pipes, resulting in water quality deterioration, pipe corrosion, and water hammer . No negative pressure frequency water supply equipment is widely used in various fields, such as urban water supply, fire fighting, industrial production, and agricultural irrigation .
