Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Nodal Seismic Acquisition System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Nodal Seismic Acquisition System is a geophysical survey technology that uses a network of compact, autonomous seismic sensors called nodes to collect high-resolution subsurface data for oil and gas exploration, geotechnical studies, and environmental monitoring. Unlike traditional cabled systems, nodal systems are wireless and self-contained, allowing flexible deployment on land, in shallow water, or on the seafloor (as in OBN systems). These nodes record seismic signals independently, enabling wide-area coverage, reduced logistics complexity, and improved data quality, especially in challenging terrains or densely obstructed areas.

The global Nodal Seismic Acquisition System market size was estimated at USD 182.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
