The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Nodulizer Cored Wire competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Nodulizer Cored Wire is a composite material in which spheroidizing agents (such as rare earth silicon-magnesium alloy powder) are wrapped in low-carbon steel strip. It is used to inject spheroidizing agents into molten iron to improve the performance of castings. It is fed into the molten iron through specific mechanical equipment to ensure precise addition of spheroidizing agents and improve the stability of spheroidizing effect and the utilization rate of alloying elements. The upstream mainly consists of raw materials, including ferroalloys (such as ferrosilicon and ferromanganese) and rare earth alloys. The downstream is primarily concentrated in the casting industry, used to produce ductile iron castings, etc. Global sales in 2024 were approximately 100,000 tons, with an average market price of approximately US\$1,400 per ton. The scale of single-line production capacity varies depending on production processes and investment scale. Industry gross profit margins range from 20% to 35%.
