Report Overview

The non-absorbable ligature clamp is a medical device used in surgical procedures to secure and occlude blood vessels or tissues during surgery. It is designed to provide a firm grip on the tissue or vessel without causing damage or slippage. Unlike absorbable ligature materials that gradually dissolve and get absorbed by the body over time, non-absorbable ligature clamps are made of materials like stainless steel, titanium, or polymer, ensuring long-term stability and strength. These clamps are sterile, reusable, and available in various sizes and designs to suit different surgical applications, enhancing surgical precision and safety.
