## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Non-Absorbable Self-Locking Suture competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Non-absorbable self-locking suture is a surgical suture material with self-locking function that cannot be naturally degraded and absorbed in the human body. The suture is usually made of polymer synthetic materials, and the thread structure is designed with serrations or anchor hooks, which can achieve unidirectional fixation during the suturing process without the need for traditional knotting operations, thereby improving surgical efficiency and reducing the risk of suture failure. It is widely used in surgical fields that require long-term tissue support and stable sutures, such as plastic surgery, cardiothoracic surgery, and general surgery.

The global Non-Absorbable Self-Locking Suture market size was estimated at USD 606.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
