Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Non-absorbable Suture Anchors competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Non-absorbable suture anchors are permanent implantable devices used for orthopedic soft tissue repair. They are made of non-degradable materials such as titanium alloy or stainless steel, pre-loaded with high-strength sutures, and implanted into the bone through drilling to achieve firm fixation of ligaments, tendons, and bone. They are widely used in surgeries such as rotator cuff repair, ankle reconstruction, and cruciate ligament repair in the knee. The upstream of the industry chain includes medical titanium rods/PEEK raw materials, ultra-high molecular weight polyethylene fibers, precision machining equipment, and ethylene oxide sterilization service providers. The midstream consists of orthopedic consumable companies with Class III medical device registration certificates, requiring expertise in material mechanics design, suture integration technology, fatigue testing, and GMP production systems. The downstream primarily targets the sports medicine and orthopedic departments of top-tier hospitals, entering clinical use through high-value consumable distributors or national/provincial orthopedic centralized procurement. Due to mature technology but intensified competition, the overall industry gross profit margin is between 40% and 60%. In 2024, the global production of non-absorbable suture anchors was approximately 2,329,682 units, with an average market price of approximately US\$220 per unit. In 2024, the global production capacity of non-absorbable wire anchors was approximately 3,106,243 pieces. The non-absorbable suture anchors market is driven by the rapid growth of sports medicine and orthopedic reconstruction procedures worldwide. Increasing incidence of sports injuries, aging populations, and rising demand for joint repair surgeries continue to stimulate market expansion. Compared with

absorbable anchors, non-absorbable products offer superior long-term mechanical stability, making them preferred in high-load-bearing repairs. Technological advancements in surface coating, suture integration, and minimally invasive surgical tools further enhance clinical adoption. In parallel, hospital procurement standards and surgeon preference for reliable long-term fixation support sustained demand. Cost control and surgical efficiency remain key development priorities across global markets.

The global Non-absorbable Suture Anchors market size was estimated at USD 512.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
