Abstracts

Non-adhesive liquid embolic agents are a type of medical substance used in interventional procedures, particularly in endovascular embolization treatments, to block blood vessels. Unlike traditional adhesive embolic agents, which rely on chemical bonding to vessel walls, non-adhesive liquid embolics do not adhere to tissue but instead occlude blood flow by physically plugging the vessel lumen. These agents are typically delivered through a catheter and are designed to solidify or gel after being injected, forming a stable mass that prevents further blood flow. They are often used for treating conditions like arteriovenous malformations (AVMs), tumors, or aneurysms, where precise occlusion of abnormal blood vessels is required.

The global Non-Adhesive Liquid Embolic Agents market size was estimated at USD 143.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.
