Abstracts

Non-alcohol hand sanitizers, also known as alcohol-free sanitizers, are antimicrobial products designed to reduce or eliminate pathogens on the hands without using ethanol or isopropanol as the primary active ingredient, instead relying on alternative antimicrobial agents such as benzalkonium chloride, triclosan, or hydrogen peroxide, which work by disrupting microbial cell membranes or oxidizing cellular components, offering a viable solution for individuals with sensitive skin, allergies to alcohol, or in environments where flammability or drying effects are a concern, while still meeting regulatory standards for efficacy against a broad spectrum of germs.
