Report Overview

The fuels are divided into two categories -- aromatic fuels and Non aromatic fuels. Non aromatic fuels, also called as ultra-low aromatic fuels, belong to the class of straight chain hydrocarbons. Nonaromatic fuels have lighter molar mass as compared to aromatic fuels. Composition of Non aromatic fuels majorly depends on the cetane number of the fuel. In case the cetane number is higher, the concentration of Non aromatic fuels increases. Non aromatic fuels are effective alternatives to conventional fuels; these hydrocarbon fuels find applications across various industries and are used as fuels in chemical intermediates, metal working fluids, and many more.

On the basis of geographical region, Asia Pacific is expected to lead the demand for Non aromatic fuels market followed by North America and Western Europe.
