The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Non-asbestos Brake Pads competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Non-asbestos brake pads refer to automotive brake friction materials that do not contain asbestos fibers and are made of environmentally friendly alternative materials. They achieve safe and efficient braking performance by using glass fiber, aramid fiber, carbon fiber, metal powder or ceramic fiber as reinforcing ingredients, combined with resin adhesives and friction modifiers. This type of brake pad does not release asbestos dust during braking, avoiding harm to the human body and the environment. It complies with international environmental protection and health and safety standards (such as EPA and REACH), has the advantages of low noise, low dust, and high temperature resistance. It is widely used in various types of passenger cars, commercial vehicles and rail transit vehicles, and is an important part of modern green manufacturing and sustainable transportation. In 2024, the global production of non-asbestos brake pads will reach 116.15 million pieces, with an average selling price of US\$46 per piece.

The global Non-asbestos Brake Pads market size was estimated at USD 5324.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
