### Report Overview

Synthetic, or non-bitumen, underlayment encompasses all the other available materials made from a range of polymers. As such, these materials can have widely varying properties. Some synthetics are designed to resist heat much better than their asphalt based counterparts, for example. These would be good choices for a metal roof installation, where heat is a major issue, but not nearly as useful for asphalt shingle installations. Non-bitumen synthetic underlayments are made from polypropylene or polyethylene.
