Report Overview

Non-chlorinated polyolefins are colorless compounds which provide higher chemical and temperature resistance as compared to its counterpart chlorinated polyolefins. Non-chlorinated polyolefins are generally used in a solvent based system as an additive or primer to enhance the adhesive property of various low surface energy substrates including polyethylene, polystyrene, polypropylene, polyethylene terephthalate and other substances. Non-chlorinated polyolefins are used in the applications where chlorine results in the generation of hydrochloric acid due to the exposure of chemicals and high temperature. Non-chlorinated polyolefins further offers excellent performance under extreme environmental condition including exposure to gasoline, high humidity to paints and coatings used in buildings, automotive, coatings done to metal surfaces and plastic substrates used in the production of laminates.
