Abstracts

A non-contact liquid cooling system refers to a cooling method in which the cooling liquid does not directly contact the heat-generating components. Instead, heat is transferred via an intermediary, such as a cooling plate, which facilitates the indirect exchange of heat between the liquid and the components. The cooling liquid flows through the plate, absorbing and carrying away the heat without direct interaction with the heated devices. Common non-contact liquid cooling solutions include cooling plate-based systems.

The global Non-contact Liquid Cooling System market size was estimated at USD 3440.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
