Report Overview

Non-Contact Temperature Sensors, whose the sensing element does not contact with the measured object, is also called as non-contact thermometers. This type of sensors is used to measure the temperature of moving objects, small objects or objects whose temperature change rapidly. And also be used for measurement of temperature distribution. Non-contact (infrared) temperature sensing reads temperature by intercepting a portion of the infrared energy emitted by an object or substance, and detecting its intensity. Non-contact is used to sense the temperature of solids and liquids, but cannot be used on gases due to their transparent nature.

Global Non-Contact Temperature Sensors key players include FLUKE, Accurate Sensors, OMRON, IFM Electronic, Turck, etc. Global top five players hold a share about 50%.

China is the largest market, with a share about 25%, followed by North America and Europe, having a total share about 40 percent.

In terms of product, Infrared Temperature Sensors is the largest segment, with a share about 90%. And in terms of application, the application includes Electronic Industry, Metallurgy Field, Petrochemical, General Industry(Pharmacy, Automobile), Transportation, etc.
