## Abstracts

Non-Destructive Weld Testing Service refers to a specialized quality assurance service used to evaluate the integrity, strength, and reliability of welded joints without causing damage to the tested components. This service employs various non-invasive inspection methods?such as ultrasonic testing (UT), radiographic testing (RT), magnetic particle testing (MT), liquid penetrant testing (PT), and visual inspection (VT)?to detect internal and surface flaws like cracks, porosity, incomplete fusion, or inclusions. Non-destructive weld testing is essential across industries where structural integrity is critical, including oil and gas, power generation, aerospace, shipbuilding, construction, and automotive. These services ensure compliance with international standards (e.g., ASME, ISO, AWS), minimize operational risks, reduce failures, and extend equipment lifespan. By providing accurate, real-time assessments without impairing the performance of the materials, NDT services offer a cost-effective and safe means of ensuring welding quality and safety in critical infrastructure and manufacturing environments.

The global Non-Destructive Weld Testing Service market size was estimated at USD 2835.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
