Report Overview

A Non-Evaporable Getter (NEG) Pump is an efficient type of vacuum pump used to remove gas from a vacuum chamber. The NEG pump uses a special material called a Getter material, which can adsorb gas molecules and trap them on its surface, thus clearing the gas from the vacuum chamber.

The Getter material in a NEG pump is typically a cerium alloy, which is made into thin films or blocks and installed inside the vacuum pump. When the Getter material is heated, it releases electrons that adsorb gas molecules onto the Getter material surface. This process does not require gas molecules to interact with the Getter material, and is therefore called non-evaporative adsorption.

The advantages of a NEG pump include high efficiency, low noise, low vibration, and long life. They are commonly used in high vacuum and ultra-high vacuum applications, such as semiconductor manufacturing, optical instruments, and space science.
