### Report Overview

Non-fermented tea, commonly referred to as green tea, is produced by preventing oxidation through heat treatment (steaming or pan-firing) immediately after harvesting the leaves, preserving their natural color, antioxidants, and fresh flavor profile. Unlike partially or fully fermented teas like oolong or black tea, non-fermented tea retains higher levels of polyphenols, particularly catechins such as EGCG, which are associated with numerous health benefits, including improved metabolism and reduced inflammation. The product is consumed both as a traditional hot beverage and in innovative formats such as ready-to-drink (RTD) bottles, powders, and dietary supplements, catering to health-conscious consumers seeking functional beverages. Major varieties include Japanese sencha and matcha, Chinese longjing and biluochun, and other regional specialties, each distinguished by cultivation methods, processing techniques, and terroir-driven flavor nuances. The market is further segmented by organic and conventional production, with increasing demand for sustainably sourced, pesticide-free options driven by premiumization trends in wellness-oriented demographics.

The global Non Fermented Tea market size was estimated at USD 1001.1 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
