Abstracts

Non-ferrous cleaning agents are specialized chemical solutions designed to safely and effectively remove contaminants such as dirt, grease, oxidation, tarnish, and surface impurities from non-ferrous metals?including aluminum, copper, brass, bronze, zinc, and titanium?without causing corrosion, etching, or discoloration, as these metals lack significant iron content and are often more reactive or prone to surface degradation than ferrous metals. These formulations are tailored to the specific metallurgical properties of each metal type, often incorporating pH-balanced, non-abrasive, and sometimes biodegradable components to preserve the metal?s integrity, appearance, and functional properties, making them essential in industries like aerospace, electronics, automotive, jewelry, architecture, and heritage conservation where surface quality, conductivity, or aesthetic appeal are critical.

The global Non Ferrous Cleaning Agents market size was estimated at USD 3150.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
