Abstracts

Non-ferrous scrap recycling involves the recovery and processing of metals such as aluminum, copper, brass, lead, zinc, nickel, and precious metals from end-of-life products, industrial waste, and manufacturing byproducts, excluding iron and steel, with the aim of reintroducing these materials into production cycles as secondary raw materials to reduce reliance on virgin resources, minimize environmental impact, and support circular economy principles. The market is characterized by its sensitivity to global metal prices, industrial activity levels, regulatory frameworks governing waste management and trade, and technological advancements in sorting and processing techniques, with key drivers including rising demand for sustainable materials, growing emphasis on resource conservation, and increasing adoption of recycling in construction, automotive, and electronics sectors. Geographically, the market is globalized, with major hubs in Asia, North America, and Europe, where infrastructure, regulatory support, and industrial demand shape regional dynamics, while challenges such as contamination of scrap streams, volatile commodity markets, and complex supply chains influence operational and economic viability for industry participants.

The global Non Ferrous Scrap Recycling market size was estimated at USD 1540.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
