Abstracts

Non-GLP acute toxicology refers to the assessment of the immediate adverse effects of substances?such as chemicals, pharmaceuticals, or consumer products?on biological systems, conducted outside the stringent regulatory framework of Good Laboratory Practice (GLP) guidelines, which are mandated for formal safety submissions to agencies like the FDA or EPA; these studies are typically employed for early-stage screening, prioritization of compounds, mechanistic research, or internal decision-making, offering greater flexibility, reduced cost, and faster turnaround times compared to GLP-compliant testing, though they lack the regulatory acceptance for official product approvals.

The global Non Glp Acute Toxicology market size was estimated at USD 872.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
