Abstracts

Non-GMO rapeseed lecithin is a natural emulsifier and stabilizer derived from the seeds of genetically unmodified rapeseed plants (primarily from the *Brassica napus* or *Brassica rapa* varieties), serving as an alternative to soy lecithin for applications where GMO avoidance, allergen concerns, or regional sourcing preferences are prioritized. It is obtained through a mechanical or solvent extraction process that separates the oil and lecithin components, resulting in a phospholipid-rich substance widely used in food, pharmaceutical, and cosmetic industries to improve texture, prevent separation, enhance moisture retention, and aid in product processing. Its non-GMO status is verified through identity preservation and certification protocols, appealing to consumers and manufacturers seeking clean-label, sustainable, and traceable ingredients free from genetic modification.

The global Non Gmo Rapeseed Lecithin market size was estimated at USD 165.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
