Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Non-invasive Focused Ultrasound System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The non-invasive focused ultrasound system is a cutting-edge medical technology that uses high-intensity focused ultrasound (HIFU) to precisely act on deep tissues in the body to achieve non-invasive treatment. The system uses an external transducer array to focus ultrasound on the target, producing thermal effects (ablating tumors) or mechanical effects (stimulating nerves/opening the blood-brain barrier), without the need for surgical incisions. It is suitable for tumor treatment (such as prostate cancer, uterine fibroids), neurological diseases (Parkinson's disease, essential tremor) and pain management. Its advantages include no radiation, fast recovery, repeatable treatment, and can be combined with MRI or ultrasound imaging for real-time guidance to improve accuracy.

The global Non-invasive Focused Ultrasound System market size was estimated at USD 851.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.
