Abstracts

Non-invasive insulin refers to insulin delivery methods that do not require traditional subcutaneous injections. These alternatives are developed to improve patient comfort and compliance. Common forms of non-injectable insulin include inhalable insulin, such as Afrezza, which is absorbed through the lungs, and oral insulin, which is being researched to survive the digestive tract and be absorbed into the bloodstream. These methods aim to offer more convenient and less invasive options for managing diabetes, reducing the burden of frequent injections, and potentially enhancing the quality of life for patients.

The global Non-invasive Insulin market size was estimated at USD 1934.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 15.20% during the forecast period.
