Report Overview

Nonsurgical liposuction generally has less-to-no recovery time as surgical liposuction but it isn't effective on large areas of fat. Its use should be limited to small, stubborn areas that remain after an adequate diet and exercise program or to patients who cannot undergo surgery. A non-invasive laser lipolysis treatment involves a practitioner applying an applicator to a specific part of your body. You will feel cooling and heating sensations until the treatment is complete, usually after around 25 minutes. Several treatments are usually needed, and results are usually seen within 6-12 weeks.
