Abstracts

A non-invasive positive pressure ventilator is a respiratory assistance device that provides positive pressure airflow to patients through a mask or helmet, without the need for intubation. It helps patients breathe more smoothly by increasing the air pressure in the alveoli, and is commonly used to treat respiratory diseases such as chronic obstructive pulmonary disease (COPD) and sleep apnea syndrome (OSA)². There are two main modes of NPPV: continuous positive airway pressure (CPAP), which provides constant positive pressure throughout the respiratory cycle, and biphasic positive airway pressure (BiPAP), which provides different positive pressures during inspiration and expiration.

The global Non-Invasive Positive Pressure Ventilator market size was estimated at USD 2116.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
